三菱電機 首部變頻抽濕機

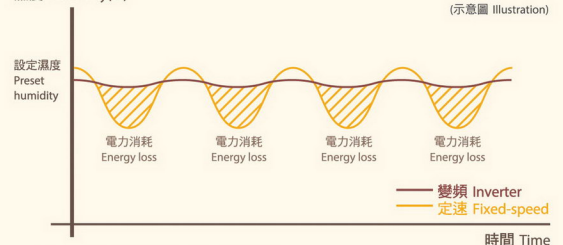

The First Inverter Dehumidifier from Mitsubishi Electric

抽濕技術上之重大突破！三菱電機首度引進變頻技術，抽濕機能配合濕度變化調整壓縮機轉速。壓縮機先以高速啟動，當達到設定濕度後自動減速，穩定運轉，造就節能、寧靜之優點，實為智慧之極致體現。相反，定速抽濕機只能靠斷續開關壓縮機來應付濕度變化，相對上較為耗電且欠穩定。

For the first time ever Mitsubishi Electric integrates inverter technology into a dehumidifier to adjust the compressor speed as the humidity level changes. First, the compressor starts at a high speed, when the humidity reaches the desired level it slows down automatically and operates steadily. This helps to save energy and runs the unit more quietly. By contrast, a fixed-speed dehumidifier can only switch the compressor on and off intermittently in response to humidity variation, which consumes more energy and creates unstable operation.

▶ 定速壓縮機 (斷續開關，十分耗電)

全新變頻抽濕機，配合頂尖科技智慧，令抽濕效能全面升級，耗電更少、威力更大，從而縮短乾衣時間，抽濕事半功倍；新增 ECO 自動節能模式，加倍省電，輕易成為新一代環保典範。

Applying top-notch technology, the new Inverter Dehumidifier underwent a full upgrade of its overall performance. It uses less electricity but more powerful, higher efficiency and shorter laundry drying time. The newly added ECO AUTO mode saves more energy, making it the new generation of environmentally friendly machine.
